Michael Mann, Tom Toles : The Madhouse Effect: How Climate Change Denial Is Threatening Our Planet, Destroying Our Politics, and Driving Us Crazy before purchasing it in order to gage whether or not it would be worth my time, and all praised The Madhouse Effect: How Climate Change Denial Is Threatening Our Planet, Destroying Our Politics, and Driving Us Crazy:

1 of 4 people found the following review helpful. You'll understand the climate crisis much better after reading this book. By GonzoZap Michael Mann is one of the smartest climate scientists around. Tom Toles is perhaps the premier cartoonist around. Together, they have put together an accessible readable summary of the climate change problem and how a few shills for the fossil fuel industry are trying to undermine actions that would protect future generations from the worst climate impacts. 2 of 5 people found the following review helpful. Effective, Intelligent, and Informative By Customer The Madhouse Effect is more than a quick read; it is dense with information and sends a very clear message to readers. This book is for everyone. From students of the environment, climate change activists, and especially for the people who don't know what to believe about Climate Change. It can be a scary topic to approach, but it is absolutely critical that the American public becomes well informed about the issue and this book is a great communicator. 2 of 5 people found the following review helpful. Five Stars By Fred He gives compelling evidence that we risk catastrophe by not taking action to alleviate the problem of global warming.

The award-winning climate scientist Michael E. Mann and the Pulitzer Prize-winning political cartoonist Tom Toles have been on the front lines of the fight against climate denialism for most of their careers. They have witnessed the manipulation of the media by business and political interests and the unconscionable play to partisanship on issues that affect the well-being of billions. The lessons they have learned have been invaluable, inspiring this brilliant, colorful escape hatch from the madhouse of the climate wars. The Madhouse Effect portrays the intellectual pretzels into which denialists must twist logic to explain away the clear evidence that human activity has changed Earth's climate. Toles's cartoons collapse counter-scientific strategies into their biased components, helping readers see how to best strike at these fallacies. Mann's expert skills at science communication aim to restore sanity to a debate that continues to rage against widely acknowledged scientific consensus. The synergy of these two climate science crusaders enlivens the gloom and doom of so many climate-themed books—and may even convert die-hard doubters to the side of sound science.
