P. Stephen Petersen : The Quantum Particle Internet before purchasing it in order to gage whether or not it would be worth my time, and all praised The Quantum Particle Internet:

Half of a hypothetical planet is on a world-wide web, the other half is not. The Reds try to understand the Blues (connected secretly) in terms of normal human behavior. They find that they behave like quantum particles. The Red Scientists eventually discover that the blues share information much as quantum Particles do. The story is a tongue-in-cheek allegory for the development of interpretations of quantum theory. Major players are Halbert Zweistein

(Einstein), Stan Exciting (Neils Bohr), and Devon Baum (David Bohm)--the 'wizard of odds'.

"Petersen has found that internet is a good scenario for his allegory. When we connect to the net we become part of a whole, in information term, whereas a quantum particle, when united to others, appears inseparable... A really interesting work, given its originality, that will attract both physics students and the occasional readers who like new viewpoints." -- Manuel Montes, The Science Book Board "Whatta crackup! This book is the funniest :>) thing ever written on quantum theory. I had to chortle all the way through Dilbert space." -- Narada Moy, PhD, physics From the Publisher Don't miss a classic in the making. Dr. Petersen, physics professor, musician, and comic, gives us a work to stand alongside Plato's 'Allegory of the Cave' and a 'Funny Thing Happened on the Way To The Forum'. This is new-science with a funnybone. From the Author You be a proton and I'll be an electron... We'll make some chemistry.
